### **DETAILED ACTION**

Receipt is acknowledged of the Remarks filled 3 September 2003.

#### ***Response to Arguments***

Applicant's arguments, see page 3, lines 20+, filed 3 September 2003, with respect to the rejection(s) of claim(s) 1 and 2 under 35 U.S.C. 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Aoki et al. (US Patent 6,103,297; hereinafter Aoki).

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Aoki.

Aoki discloses a color display device (column 2, line 19) comprising:

- a substrate (column 2, line 21);

- a phosphor pattern of phosphor regions containing phosphors for emitting, in operation, red, blue and green light through a display window (column 1, line 18);
  - wherein the blue phosphors comprise phosphor particles provided with blue pigment (column 2, lines 26-29),
- at least a blue color filter layer extending between the blue phosphor and the substrate (column 2, lines 23-24).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Aoki in view of Van Doorn et al. (US Patent 5,942,848; hereinafter Van Doorn).

Aoki is silent as to the thickness of the blue filter layer.

Van Doorn teaches a blue filter layer having a thickness less than 2 $\mu$ m (column 4, line 67).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a color filter having a thickness less than 2 $\mu$ m in the device disclosed by Aoki in order to produce a more uniform phosphor coating (column 5, line 5).

**Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth Gemmell whose telephone number is (703) 305-1937. The examiner can normally be reached on Monday-Thursday 6:30-5.
